

Bathroom Questionnaire 2

Dear Grace and Ibrahim,

Thank you for answering the previous questionnaire.

For my draft I would like to create something that can help you in your washing process in a particular way.

I have a special interest in the things you take to the shower and you use for washing. I am thinking about designing something that can help you carrying these things. Would it be helpful for you to have something like this?

What should it integrate? Are there any extra functions which could be useful? For example, that you can also carry other things in it (e.g. school stuff)?

I also have a few more questions about the washing process:

-How do you transport the water from home to the bathrooms? Do you carry it in the bucket? Is the bucket heavy with the water in it?

-The towel, soap and scrubber are probably wet when you finished washing. Is it still easy to bring them home or do you get wet? Is the soap slippery? Or doesn't it bother you?

-Do you know what the scrubber is made of?

-Why is it not possible to shower at home when you have the water there? Is it because of the drain and that everything gets wet?

-What do you mean with: „Having a shower would make the washing process easier?“ Having a shower at home/a private shower? Or having more bathrooms? Or having a shower with water tap, shower head etc.?
